Fitting the Easyboot Mini on Your Horse

1. Fully open the upper to ensure that no hook and loop areas are touching.
2. Fold down the back portion of the boot.
3. Facing the rear of the horse, pick up the foot and slip it into the boot, toe first. Place the sole of the hoof firmly down into the Easyboot Mini. Pull the rear of the boot up around the heel bulb.

1. After a fresh trim, measure the width of the hoof across the sole at the widest point.
2. Measure the length of the hoof from the toe to the buttress line of the heel. The buttress line is the farthest weight bearing point of the heel where the hoof wall ends. Do not include the heel bulbs in the measurement.
3. Compare your measurement with the size chart below.
4. Ideally, the length and width measurement will fit into the same size. If the length and width measurements indicate different sizes, select the larger size. If the width and length measurements are different by more than one size, this boot style is not recommended. Be sure to check your measurements against an alternative boot in the EasyCare line--another style may accommodate your horse's hoof shape better.
